

WHEEL-END ACCESSORIES & TOOLS

SEAL INSTALLATION TOOLS

Our installation tools are designed and manufactured with the installer in mind. To maximize installation ease, safety and longevity, our tool kits are engineered to meet the specific installation requirements for each seal design. With up to 90% of all oil bath seal failures, regardless of brand, due to improper installation, we recommend using only required manufacturer-application-specific installation tools to validate the seal's warranty.

Commercial-Grade Tool Kits

Available for the Ultimate, MVP, and Endurance LeatherPRO™ wheel seals

- Seal Drive Plates are. Made from tool-grade steel and are precision cut to match the seal body in the exact area designed for installation load bearing.
- Drive Handles are made from tool-grade steel and have a no-slip, knurlized handgrip area for better tool control. The robust design allows for years of service.
- Bearing Guides are made of a tough engineered plastic for dimensional stability and long life.
- Axle Drivers, designed for use with Axle Sleeve Drive Plates, are robust for reliability in the field. The welded steel assembly with its convenient handle helps to prevent hand injuries.

Insta-Tool® Seal Driver

The Insta-Tool® is an all-new, patented seal driver designed for single use. It offers installers with occasional needs an inexpensive yet effective alternative to professional-grade installation tools. The Insta-tool assures proper installation by directing installation force to the area on the seal designed for withstanding these loads. Limited to certain applications, in seal kit form or individually packaged.

Seal Removal Tool

One seal removal tool fits all applications. Helps prevent damage to the bearing and hub during seal removal. Part Number SR
